PROFILE

Statistics graduate with hands-on experience in time-series modelling, machine learning, and BI reporting (Tableau, Power BI). Combines strong statistical foundations (Econometrics, hybrid modelling) with practical experience building dashboards and forecasting tools for government and academic institutions. Comfortable working across the data pipeline, from raw data to statistical modelling to stakeholder-ready visualization.

EDUCATION

Universitas Brawijaya | Malang, East Java

Bachelor of Statistics | September 2022 – January 2026

- GPA: 3.70/4.00
- Undergraduate Thesis: Engineered a hybrid GARCH-RNN time-series architecture in R for high-volatility asset modelling (XRP), bridging traditional econometric frameworks with deep learning to improve predictive accuracy. Reduced negative log-likelihood by ~10% against traditional GARCH model, while maintaining model interpretability, establishing a methodology applicable to Market Risk and Value at Risk (VaR) estimation.
- Relevant Coursework: Time Series Analysis, Econometrics, Neural Networks, Exploratory Data Analysis, Operations Research, Survival Analysis.

CORE COMPETENCIES & TECHNICAL SKILLS

- Statistical Methods: Econometrics, Time Series Analysis, Statistical Modelling, Machine Learning.
- Programming: R, Python, C++, SQL.
- Data Visualization: Tableau, Power BI.
- Statistical Software: SPSS, Minitab, Gretl, Excel.

EXPERIENCE

Badan Perencanaan dan Pembangunan Daerah Kota Malang

Internship | June 2025 – August 2025

- Engineered a macroeconomic forecasting model using Exponential Smoothing and GRG Nonlinear optimization in Microsoft Excel to project long-term regional development indicator (IKLI and IPMas) through 2030 with 2% MAPE.
- Applied statistical validation methodologies to data-driven public policy frameworks, translating regional economic indicators into insights used for long-term planning.

Badan Pusat Statistik Kota Malang

Field Surveyor and Data Analyst | June 2024 – July 2024

- Collected primary data across 8 regional stakeholders for the Regional Potential database, ensuring accuracy and consistency in reporting.
- Built visual reporting systems mapping regional potential, supporting decision-making by local government officials.

Department of Statistics – Universitas Brawijaya

Teaching Assistant | March 2024 – December 2025

- Facilitated technical labs and tutorials for 230+ students across 5 core subjects: Introductory to Probability Theory, Mathematical Statistics I & II, Operations Research, and Time Series Analysis.
- Mentored students in using R, Python, and Excel Solver for optimization and predictive modelling.
- Graded technical assignments and upheld academic integrity standards across all coursework.
